Re: Letter of Recommendation

The selection of the heating method for the individual working sites was elaborated from the point of projects by the company SEWA Consulting, s.r.o. They have installed radiation heaters in our production hall. We have certain experience with the latter in plants in Netherlands. We have installed there also gas fired infrared radiators.

The production hall is heated along the individual active working zones with the possibility of the local heating of our production technology service sites.

All acts and activities, starting with the building permit up to the approval, related to the gas distribution system in our premises along with the regulation station delivery and heating, have been performed in time. WE have been absolutely satisfied with the executed and assumed jobs for us by the company SEWA Consulting.

Sincerely

Drs. Erik Palinský  
konateľ
